

The first newsroom integration for Microsoft 365

Content created without switching tools.

Stories are created, managed and continuously developed – exactly where communication begins.

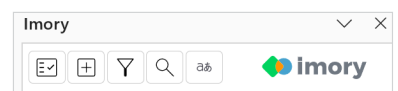

Work directly in Word and Outlook

Imory integrates seamlessly with Microsoft 365 and extends Word, Outlook and Teams with the core functions of the digital newsroom.

Content can be used from the newsroom directly in Word and Outlook, or ideas, stories and language guidelines can be transferred from Word and Outlook into the newsroom.

What used to be fragmented becomes a seamless workflow – exactly where teams work in Microsoft 365.

- New statement
- New idea
- New story
- New Wiki
- Open taskpane

Modern newsroom work in

How your workflow works in Microsoft 365

1 An email becomes the starting point
In Outlook, a request, idea or coordination can instantly become a topic.

2 Stories are structured and organised
With one click, the email is transferred into Imory and clearly assigned.

3 Microsoft Word inside the newsroom
Access stories, content and existing language guidelines directly while writing via the Imory plug-in.

4 Content is automatically linked
Make texts, coordination and tasks usable across Imory and Outlook.

5 Cross-team collaboration
Teams work within the same context – across applications and with centralised data.

Why this integration matters

- Communication rarely fails because of a lack of ideas – but rather because of processes
- Content, coordination and stories are often created in decentralized systems
- Bring newsroom context into Microsoft 365 applications
- Use, edit and assign content wherever you work
- The Imory integration brings Microsoft 365 and the newsroom together

1 Workflow
Instead of isolated tools

0 Copy-Paste
No manual transfer

1 Source
One version, one status

100% Focus
Focus on content, not processes

1 Context
All content in the right place

0 Media Breaks
No system switching
